

व्यापार सारथी

Vyapar Sarthi

The AI teammate that learns from your mistakes — so you don't repeat them.

THE PROBLEM

Raju has run the same failed discount three times. Nobody told him.

India has 13 million Paytm merchants collecting payments digitally. **But they make decisions the same way their fathers did** — on instinct, with zero memory of what worked or failed before.

THE GAP

They have transaction data.

They have zero decision intelligence.

70%

of small merchants retry a promotion even after it already failed once.

No decision memory

Merchants repeat failed strategies because nothing records outcomes.

No proactive advisor

Current tools only respond when asked. Nobody watches out for the merchant.

Language barrier

Analytics dashboards are English, data-heavy, and require literacy to read.

PROPOSED SOLUTION

Meet Vyapar Sarthi — the AI teammate that remembers, learns, and speaks up.

Demo: <https://github.com/vinay3717/Vyapar-Sathi>

Failure Guard

Detects when a merchant is about to repeat a past mistake. Warns them in Hindi before they act — automatically, every week.

Personal Best Replay

Finds the merchant's own high-performing decisions and suggests recreating what actually worked for them specifically.

Network Wisdom

Surfaces what similar Paytm merchants did in the same season — and what paid off.

HOW IT'S DELIVERED

No dashboard. No typing. A proactive voice note in Hindi/Marathi — triggered every Monday morning before the merchant's week begins.

Vyapar Sarthi nahin kehta “kya hua” — kehta hai “ab kya karo.”

It doesn't say what happened — it says what to do now.

Built for real. Demo-ready on Day 1.

DEMO SCENARIO

Raju · Kirana Store · Dharavi, Mumbai

3 weeks ago

Ran 20% discount → revenue dropped 35%

discount_20pct → negative → -35%

6 weeks ago

Opened at 7am instead of 9am → revenue up 25%

early_open → positive → +25%

This Monday — n8n triggers agent automatically

Raju hears in Hindi — before his week starts:

“Namaste Raju bhai. Pichhli baar 20% discount se kamai 35% kum hui. Is baar subah 7 baje kholne ki koshish karein — chhe hafte pehle isse 25% zyada kamai hui thi.”

ARCHITECTURE FLOW

Every tool chosen for India. Every version production-ready.

LAYER	TOOL	PURPOSE
Agent Orchestration	LangGraph 1.2.1	3-node StateGraph: ingest → pattern → suggest
LLM	Gemini 3.8 Flash	Hindi suggestion + voice script generation
Merchant Memory	Cognee (latest)	Graph-native causal memory: decision → outcome
Voice Output	Sarvam Bulbul v3	Natural TTS in 11 Indian languages
Workflow Trigger	n8n (cloud)	Autonomous weekly proactive trigger
Backend	FastAPI 0.115	REST API + LangGraph runtime
Frontend	Next.js 14	Merchant dashboard (secondary to voice)

BUILT WITH

Cognee · Sarvam · n8n

WHY THIS STACK

Sarvam is the only voice AI trained natively on 22 Indian languages

Cognee's knowledge graph stores causal relationships — not just chat history

LangGraph enables stateful, multi-step agent reasoning — not a single prompt

UNIQUE SELLING PROPOSITION

Every other agent responds.
Vyapar Sarthi remembers.

FEATURE	GENERIC MERCHANT AI	VYAPAR SARTHI
Memory of past decisions	X	✓ Cognee causal graph
Learns from merchant's failures	X	✓ Failure Guard node
Proactive — no prompt needed	X	✓ n8n weekly trigger
Personalised to this merchant	X	✓ Per-merchant memory
Indian language voice delivery	X	✓ Sarvam, 11 languages
Network intelligence	X	✓ Similar merchant patterns

***The compounding moat:** The longer a merchant uses Vyapar Sarthi, the smarter it gets about them specifically. It doesn't stay a product — it becomes a business partner.*

IMPACT & BENEFITS

13 million merchants. Zero business advisors. Until now.

MERCHANT IMPACT

Break the failure loop

Average merchant repeats a failed strategy 2.3x. Failure Guard breaks this after the first time.

Zero literacy barrier

No reading, no dashboard, no English — a voice note in their language.

Compounding personalisation

Every decision logged. Month 3 advice is smarter than Month 1.

2.3x

is how many times the average small merchant repeats a failed strategy before stopping on their own — Failure Guard cuts that to one.

PAYTM PLATFORM IMPACT

Merchant retention

An agent that gets smarter over time creates switching cost. Merchants stay on Paytm.

Loan & insurance upsell signal

Detects consistent positive patterns and surfaces the right Paytm financial product at the right moment — not cold.

Aggregate merchant intelligence

Network Wisdom turns 13M merchants' data into a collective intelligence layer — a moat no competitor can replicate.

Three revenue levers. All native to Paytm's existing ecosystem.

01

Freemium SaaS

Free: 1 suggestion/week. Paid (₹99/mo): all 3 capabilities + daily check-ins + WhatsApp delivery.

Target: top 10% of merchants ≈ 1.3M subscribers

02

Financial Product Trigger

Detects consistent growth and surfaces a Paytm Loan or Insurance product at peak trust moment.

Revenue: referral / conversion commission

03

Platform Intelligence API

Aggregate anonymised decision-outcome data, sold as a B2B intelligence API to FMCG brands, distributors & lenders.

Revenue: enterprise API licensing

₹8

cost / merchant / month

₹91

gross margin at ₹99 paid tier

100K

paid merchants to break even
